Create professional PDF documents with novaPDF!

Softland is pleased to announce the release of novaPDF 2.1, an update of the award-winning PDF creator that provides users (both business and home users) a complete PDF solution. Version 2.1 is a free upgrade to all registered users of version 2.0.

This updated introduces some fixes and enhancements, such as:

- Added possibility to set-up left, right, top and bottom paper margins independently.
- Enhanced zoom option. You can modify zoom origin now, center the page horizontally/vertically and align it right/bottom.
- Enhanced save options. If PDF file with same name exists, novaPDF can "Auto Number New" files.
- Corrected scale handling and added extended zoom factor.
- Corrected detection of file links.

About novaPDF

novaPDF offers an intuitive interface making all features easily accessible for both beginners and professionals. It is a fully featured PDF creation application that empowers you with a far greater choice of PDF converting options than other PDF creation utilities:

- **Create Standard PDF files**
Creates 100% standard PDF files that can be read or printed by popular PDF viewer (reader) programs (such as Adobe Acrobat Reader).
- **PDF Security and Document Protection**
You can secure your PDF documents by requiring others to enter a password in order to view or print the content of your document. Full 40-bit and 128-bit encryption is supported by novaPDF and the user is able to control whether the PDF can be viewed, printed, modified, copied or annotated.
- **High-Quality Searchable PDF files**
Creates high-quality searchable PDF files from virtually every Windows application, accessing its functionality through a printer driver interface. Once novaPDF is installed as the default printer, you can simply click the "Print" button from any Windows application to have your PDF immediately created using novaPDF.
- **Network Printer Sharing**
novaPDF can be installed on one computer in a network environment (printer server) and used by any other computer in that network, without having to install it on each computer. Just share the printer on the printer server and use it to create PDF files from any other computer.
- **PDF Links Support**
novaPDF can recognize links to files and URLs that are included in the original document and recreate them in the generated PDF file as clickable links.
- **Optimized File Sizes**
Text and images can be compressed using ZIP compression, respectively JPEG compression, providing this way the possibility to create smaller PDF files.

- **User Profiles**
Define different profiles, each with its own settings for page size, resolution, fonts, compression, document info and save settings.
- **Does not Require other 3rd Party Software**
Users can generate PDF files without the need for 3rd party software (like Adobe Acrobat or GhostScript).
- **Document Properties**
Set document properties for PDF files (author, title, subject, keywords).
- **Font Embedding, Graphics Resolution and Page Size Controls**
Supports font embedding for all TrueType and OpenType fonts. Users can select the graphics resolution of the resulting PDF, and can control PDF page size. novaPDF supports the creation of custom page sizes and automatic scaling in inches, millimeters and points.
