Create professional PDF documents with novaPDF!

Softland is pleased to announce the release of novaPDF 5.1, a major update for the award-winning PDF creator that provides users (both business and home users) a complete PDF solution.

This update introduces some enhancements and fixes, such as:

- Added OEM edition for developers
- Added user interface localization (Greek, Hungarian and Vietnamese languages)
- Added "Correct fill color" option
- Bug fixes for Vista and Windows 2000

About novaPDF

novaPDF offers an intuitive interface making all features easily accessible for both beginners and professionals. It is a fully featured PDF creation application that empowers you with a far greater choice of PDF converting options than other PDF creation utilities:

- **PDF Bookmarks support**
novaPDF can detect the headings in the printed document and add bookmarks in the generated PDF files. You have to define the text attributes for the document headings (font, size, style, color) and for the generated bookmarks.
- **Public Profiles (Server edition)**
These profiles are created on the server computer and are automatically propagated to all client computers. You can configure some profiles to save the PDF files in a folder on server and all client computers will generate the PDF files in that folder.
- **PDF Security and Document Protection**
You can secure your PDF documents by requiring others to enter a password in order to view or print the content of your document. Full 40-bit and 128-bit encryption is supported by novaPDF and the user is able to control whether the PDF can be viewed, printed, modified, copied or annotated.
- **High-Quality Searchable PDF files**
Creates 100% standard PDF files from virtually every Windows application, accessing its functionality through a printer driver interface. Once novaPDF is installed as the default printer, you can simply click the "Print" button from any Windows application to have your PDF immediately created using novaPDF.
- **Network Printer Sharing**
novaPDF can be installed on one computer in a network environment (printer server) and used by any other computer in that network, without having to install it on each computer. Just share the printer on the printer server and use it to create PDF files from any other computer.
- **PDF Links Support**
novaPDF can recognize links to files and URLs that are included in the original document and recreate them in the generated PDF file as clickable links.
- **Send generated PDF via email**
novaPDF can send PDF files using the default email client, or you can enter the SMTP details and the PDF files will be sent directly from novaPDF, without interfering with your email client.

- **User Profiles**
Define different profiles, each with its own settings for page size, resolution, fonts, compression, document info and save settings.
- **Does not Require other 3rd Party Software**
Users can generate PDF files without the need for 3rd party software (like Adobe Acrobat or GhostScript).
- **Document Properties**
Set document properties for PDF files (author, title, subject, keywords).
- **Font Embedding, Graphics Resolution and Page Size Controls**
Supports font embedding for all TrueType and OpenType fonts. Users can select the graphics resolution of the resulting PDF, and can control PDF page size. novaPDF supports the creation of custom page sizes and automatic scaling in inches, millimeters and points.
- **International Character Support**
Supports international character sets, enabling users to generate PDF files using almost any Latin, Cyrillic or Asian character set. novaPDF offers multi-language support too.

About Softland

Softland is a privately held company founded in 1999 that provides a complete range of custom software development and consulting services, offering cost-effective, innovative and practical solutions in client/server architecture and Internet solutions.

Softland provides complete software development lifecycle services, as well as maintenance for systems after implementation. Services include project management, software design, software development, quality assurance, documentation and technical support.

AVAILABLE FOR REVIEW (LICENSE KEY COULD BE PROVIDED UPON REQUEST)
